

NEW: F-Type Gloss Fiba print

Ultra smooth, fourdrinier made, acid free, brilliant white, 300gm2

The F-type gloss is styled after the traditional Bariet papers that are used for fine museum and gallery editions. This new Innova media produces realistic air dried F-type prints with an inkjet printer reminiscent of traditional Silver Halide prints. No longer will photographers have to maintain a wet lab to create archive quality black and white prints.

F-type Gloss is designed for use with dye or pigmented ink printing systems and provides excellent d-max and color gamut. As with the entire Innova range, the printed output provide an exceptional degree of scuff resistance; thus reducing post printing damage. The base material is alpha cellulose and manufactured to archive quality specifications.

Applications:

- Museum/conservation grade
- Fine art & photographic reproduction
- Photo restoration - memory albums & photo albums
- Graphic arts, cards, post cards

Compatible with:

Dye & Pigmented inkjet systems
